

INSPECTION REPORT REVIEW  
POTENTIAL HAZARDOUS WASTE SITE

SITE NAME : GOODSON 7 SON TRUCKING  
LOCATION : CHANNELVIEW  
SITE NUMBER: TXD981052475  
SURVEY DATE: 4/24/90 INSPECTED BY: STATE (FIT) TAT OTHER: \_\_\_\_\_  
LABORATORY : CLP EPA OTHER \_\_\_\_\_

RECEIVED FROM: Bill Taylor DATE RECEIVED: 1/31/90

SAMPLE TYPE(s): N/A SSS Recommendation 4/27/90

SOIL	SURFACE WATER	GROUND WATER	DRINKING WATER
off / on -site	off / on -site	off / on -site	off / on -site

CONTAMINANT(s): Organics Inorganics Radionuclides Microbiological

FOLLOW UP (Y/N):

<u>N</u> (Re)Sampling Requested	<u>N</u> Locate Drinking Water Sources
<u>N</u> Further Action is URGENT	<u>N</u> Keep Site Active ("N"=No Further Action)
	<u>N/A</u> Concur with Report Recommendations

SUMMARY: A site screening site reassessment was conducted at this site on 4/24/90.

Solvents allegedly were dumped at the site, but there is no physical evidence to confirm this. A low lying area was filled with cement flue dust, of which the main constituents are inorganic and relatively non-hazardous.

Three rounds of sampling have been conducted since 1985. Conclusions based on these samples are stated in the Sampling Inspection Report dated 2/28/89. DDT was detected in both on and off-site soil samples, although the source is unknown (not from this site). Oil constituents were detected in proximity off-site, but upstream contamination is suspected. Without further investigation, only calcium, potassium and sodium contaminants can be attributed to the site. Nearest water well are more than 1 mile distant. There are not surface water targets.

RECOMMENDATION: Do not recommend further sampling.

(from the cement flue dust)
